PM Family Care Tracker (PM-FCT) Latest News

The Union Home and Cooperation Minister recently launched the PM Family Care Tracker (PM-FCT) as a pilot project in Gujarat.

About PM Family Care Tracker (PM-FCT)

- It is a **digital platform** aimed at **strengthening maternal and child health, nutrition, and family welfare**.
- The digital platform would ensure that **pregnant women, mothers, and children receive all eligible government benefits** through **continuous monitoring** and timely intervention.
- It has been designed to **digitally monitor every stage of a child's development**, from **pregnancy through 18 years of age**, while helping eligible families receive welfare benefits on time.
- The PM-FCT provides **end-to-end monitoring of key health milestones**, including antenatal and postnatal care, immunisation, nutrition, growth monitoring, **school enrolment and attendance**, and **adolescent health services**.

- The platform also features **digital Health Passports for individuals and families, dashboards to facilitate delivery of government welfare schemes, and automated alerts for missed vaccinations and other essential health services.**
- For Example:
 - Alerts will be generated automatically if a child misses vaccination or drops out of school.
 - Notifications will reach local officials, legislators and Members of Parliament, enabling volunteers and government authorities to intervene promptly and ensure that every child receives essential services.
- It is expected to enable **timely interventions, reduce maternal and infant mortality,** address malnutrition, and minimise gaps in service delivery.
- PM-FCT is designed as a **family-centric digital platform,** rather than maintaining separate records for different schemes, allowing authorities to **track the health and welfare status of every family member through a single interface.**
- The initiative aims to **improve convergence across multiple government departments** by **integrating data from birth and death registration systems,** and **health, nutrition and education databases.**
- The **pilot project** will initially be implemented in **Gandhinagar** and, if successful, is **proposed** to be expanded across Gujarat and **later replicated in other states.**
