Mount Bromo Latest News

Indonesia recently deployed aircraft and hundreds of firefighters to control a major wildfire in Mount Bromo National Park.

About Mount Bromo

- It is a small but **active volcanic cinder cone** located on the **Indonesian island of Java**.
- It is located in the **center of the Sandsea Caldera**, itself only a portion of the **larger Tengger Caldera**.
 - The **Sandsea caldera** formed around 8,000 years ago, in what must have been a massive eruption.
 - Subsequent volcanic activity formed the cluster of cinder cones in the caldera's center, including Bromo.
- The historical record indicates **eruptions of Bromo every few years since 1804**, and geologic evidence indicates eruptions at least several hundred years earlier.
- The most **recent eruption** occurred in **2004** and tragically killed two tourists.
- There are 1,025 reported species of flora, of which 226 species are orchids and 260 are medicinal and ornamental plants.
