

Report Fish Disease App

January 11, 2024 • vajiramandravi.com

About Report Fish Disease App

- The mobile application intends to empower fish farmers with a convenient and efficient platform to report diseases on their farms.
- Central Institute of Fisheries Technology (CIFT) is one of the collaborative partners of the NSPAAD project of which ICAR-NBFGR is the lead institute, under which this app is developed.
- Features
 - Its intuitive and user-friendly interface enables easy accessibility to fish farmers.
 - The app offers an easy disease reporting format, where farmers can easily report disease outbreaks by providing essential information such as location, species affected, symptoms observed, and images.
- Significance
 - Geo-tagging technology facilitates swift response from authorities and the receivers get real-time updates on the status of their reported cases, ensuring transparency and accountability in the disease management process.

- The app also serves as an information hub, providing farmers with valuable resources on disease prevention, treatment, and best aquaculture practices.
 - It is to provide a comprehensive package to ensure diagnosis, prevention, control, and treatment of aquatic animal diseases, thereby providing solutions for encouraging the aquaculture farmers.
 - It is expected to transform disease management in aquaculture and ultimately enhance the sustainability and productivity of this critical sector through early disease detection, data-driven decision-making, capacity building and efficient resource allocation.
 - It promises to improve the livelihood of fish farmers, safeguard the nation's food security, and contribute to the sustainable growth of the aquaculture industry.
-

Q1) What is Geotagging?

Geotagging is the process of appending geographic coordinates to media based on the location of a mobile device. Geotags can be applied to photos, videos, websites, text messages, and QR codes, and could also include timestamps or other contextual information.
