

What is Mitigation Work Programme (MWP)?

June 15, 2024 • vajiramandravi.com

About:

- The Mitigation Work Programme (MWP) is a **process established by the United Nations Framework Convention on Climate Change** (UNFCCC) to help countries **scale up their mitigation ambition and implementation** to achieve the 1.5°C goal of the **Paris Agreement**.

Objectives:

- **Generate discussions:** Foster innovative discussions among policymakers and stakeholders to overcome barriers to scaling up mitigation action.
- **Inclusive participation:** Ensure diverse participation to support national processes and practical domestic policymaking pathways.
- **Explore opportunities:** Identify cost-effective and scalable mitigation opportunities to help countries implement and enhance their Nationally Determined Contributions (NDCs).
- **Operationalization:** Conduct annual global dialogues and investment-focused events from 2023-2026.
- **Address equity and sustainable development:** Focus on equity, sustainable development, and synergies with adaptation, considering regional approaches.

UNFCCC:

The UNFCCC, established in **1992** during the **Earth Summit in Rio de Janeiro**, aims to stabilize greenhouse gas concentrations to prevent dangerous climate change, ensuring ecosystems adapt naturally and sustainable development is maintained.

Q1: What is the goal of Paris Agreement?

The primary goal of the Paris Agreement is to limit global warming to well below 2 degrees Celsius above pre-industrial levels, with an aspirational target of limiting the temperature increase to 1.5 degrees Celsius. This is to prevent the most catastrophic effects of climate change.
