Nimbrix Missile Latest News

Swedish defense company Saab recently announced the development of a new missile named Nimbrix.

About Nimbrix Missile

- It is a **counter-unmanned aircraft system (C-UAS) missile**.
- The missile is being **developed to counter** the growing battlefield threat posed by **small unmanned aerial vehicles (UAVs)**.
- It was **developed by the Swedish defense company Saab**. It is **its first dedicated C-UAS** missile.
- Saab designed the missile to **minimize costs**, including through the **use of additive manufacturing** and low-cost commercial and military off-the-shelf parts.

Nimbrix Missile Features

- It is a **“fire-and-forget” guided missile**.
- The missile will offer a **range of up to 5 km** and use an **active seeker to track targets**.

- It uses an **air-burst warhead** designed to **detonate in the vicinity of small drones** or other UAS, **bringing down multiple at a time**.
- Nimbrix is **intended for ground-based use**, operating either independently or as part of wider air defence systems.
- With adaptable mounting options, it **can be fitted to vehicles** or fixed positions to meet different customer requirements.
