

Hwasong-17

November 19, 2022 • vajiramandravi.com

About Hwasong-17:

- The Hwasong-17 is nuclear-armed North Korea's biggest missile yet.
- It is the largest road-mobile, liquid-fuelled ICBM in the world.
- Its diameter is estimated to be between 2.4 and 2.5 metres, and its total mass, when fully fuelled, is likely somewhere between 80,000 and 110,000 kg.
- Unlike North Korea's earlier ICBMs, the Hwasong-17 is launched directly from a transporter, erector, launcher (TEL) vehicle with 11 axles.
