National IED Data Management System (NIDMS) Latest News

The Home and Cooperation Minister recently launched the National IED Data Management System (NIDMS), marking a significant step towards strengthening the country's counter-IED and internal security architecture.

About National IED Data Management System (NIDMS)

- It is a **national-level digital platform** developed by the **National Security Guard's (NSG)** National Bomb Data Centre.
- It will enable **systematic data collection and analysis related to Improvised Explosive Devices (IEDs), enhancing the investigation process of terrorist incidents** in the country.
- It will function as a **two-way, integrated online platform accessible to the National Investigation Agency (NIA), Anti-Terrorism Squads, state police forces and all Central Armed Police Forces.**
- **Data related to any explosion or IED incident** across the country **can be uploaded** and analysed to support investigations.

- The platform will play a crucial role in “**supporting post-blast investigations** and enhancing **coordination among various security and law enforcement agencies** across the country.
- **NSG** has **maintained a comprehensive database of bomb explosions since 1999**, which will **now be made available** to law enforcement agencies nationwide **through NIDMS**.
- The system will **help analyse patterns of attacks, modus operandi and types of explosives used**, and assist in **establishing linkages** between incidents.
- This platform will strengthen the process of collecting, standardizing, integrating, and securely sharing IED-related data.
