

Adderall

October 16, 2022 • vajiramandravi.com

About Adderall:

- Adderall is the brand name for the formulation that consists of a combination of **dextroamphetamine and amphetamine**.
- It is an **FDA-approved drug for the treatment of attention-deficit hyperactivity disorder (ADHD) and narcolepsy**, a sleep condition that causes daytime sleepiness.
- Adderall belongs to the class of drugs known as **stimulants** and increases the levels of dopamine and norepinephrine in the brain.
- For people diagnosed with ADHD, Adderall can help improve focus, concentration, impulse control and hyperactivity, because of its effects on the central nervous system.
- Adderall is classified as a **Schedule II drug in the US**, which means that while it has positive medicinal effects, there is a large potential for abuse.
